As peças de acabamento com vidrados de cores mais transparentes podem apresentar variações de tonalidade ao longo da superfície, devido ao maior depósito de vidro nalgumas zonas, nomeadamente junto às arestas (designado por “cordão”).

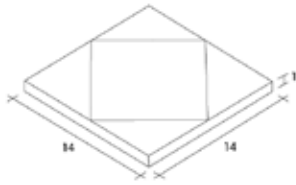

| Finishing pieces with more transparent colored glazes may present variations in tone across the surface, due to the greater deposit of glass in some areas, particularly near the edges (known as “cord”).

Nos azulejos de relevo com vidrados de cores mais transparentes, variações de tonalidade ao longo da superfície de cada azulejo são expectáveis, nomeadamente tons mais escuros no baixo relevo devido ao maior depósito de vidro e tons mais claros no alto relevo.

| In the relieve tiles with more transparent transparent coloured glazes, variations in tone along the surface of each tile are to be expected, namely darker tones in the low relief due to the greater deposit of glass and lighter tones in the high relief.
